

Immersive 3D Tours for Real Estate

Pre-sell and pre-lease properties effortlessly

Toll Brothers

AMERICA'S LUXURY HOME BUILDER®

Zaha Hadid Architects

Our Partners

We see our clients as partners. Our CGI teams are interested in building long-term cooperation with every partner and help them develop the most convenient workflows. This allows a client to get top-quality results within the shortest amount of time while cutting all unnecessary expenses.

Unreal Engine boosts your business in various ways. Here are the primary benefits

Streamlined Presales

Help your prospects make buying decisions faster and in your favor with Unreal engine-based visual tools.

Impactful Marketing

Grab and keep the attention of your target audience easily. Grow their interest with every second they watch your presentation.

Enhanced User Experience

Impress your prospects with immersive, game-like experiences using UE-based visual materials.

Custom User Scenarios

Your clients can explore the property through a virtual tour, choose available units, view layouts, and compare design options to find their perfect match. This way, you engage only with genuinely interested potential buyers.

Detailed Amenities Viewing

With Unreal Engine for real estate, your potential clients can stroll through any amenity, examining it from every angle. What's more, they can read detailed information about amenities in the pop-up windows.

Interior Viewing & Customization

A client can 'visit' apartments to compare layouts & interiors and see window views that promise breathtaking sunsets and tranquil morning horizons. An in-built configurator will help customize the interior.

Time of the Day Change

With a Pixel Streaming presentation, viewers can tweak time settings with just one click, exploring real estate in various lighting scenarios.

Weather Change

Through a Pixel Streaming presentation, your potential clients can modify weather settings to see the property in different atmospheric conditions.

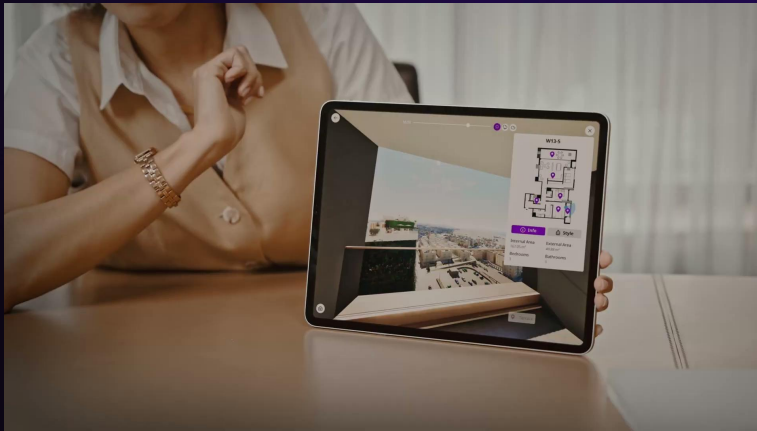

Unit Selector

Using this function, viewers can easily choose among available units, delving into detailed views of different apartments.

Pixel streaming offers flexible presentation methods tailored to your clients' preferences. Explore the options

Online presentation on your website

Let your potential clients take an interactive virtual journey throughout your project remotely, 24/7, through their device's web browser.

Offline presentation at your sales office

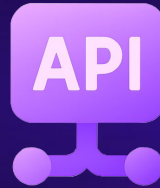

Invite interested prospects to your office and let them explore the property through the exclusive offline presentation on your device.

Unreal Engine offers additional benefits to maximize your business success

Virtual Reality Experience

Upon your request, we can create a full-blown VR experience for your client presentations. This way, you will completely immerse your prospects in your real estate project and leave a lasting impression.

API Integration

Once a potential client finished viewing and customizing property with Pixel streaming, they can immediately reserve the unit they fell for. You will get notified about that in your CRM with the help of API integration.

Reduced Marketing Costs

With Unreal Engine, you get a whole pack of marketing visuals: an interactive stream, still renders, and animations.

460 3D Artists

Our studio was founded in 2011 by a group of architects and designers with the goal to provide the best experience to professionals outsourcing 3D modeling and rendering.

Over the years, the company has been divided into 2 brands, each specializing in creating CGI for a particular industry.
